

Bram quali analysis

C van Geel Vastgoed B.V. 2

Emill: [00:00:00] Uh, thank you so much for taking time to

Bram: No problem.

Emill: give us an interview here. Uh, can you state your name and your position?

Bram: Yes, my name is Bram, Bram Verberg. I'm working at Van Geel Forklift. Um, and I'm, uh, responsible for the marketing and, uh, uh, a part of our sales team.

Emill: Okay, great. Uh, could you describe or say how familiar you are with, uh, artificial intelligence?

Bram: Yeah, for me, this is quite new. Actually, I was starting, I think, around April this year with the AI. I heard about it actually when I was, uh, working out and some guy told me, uh, I need to download the app. And I was just, uh, yeah, just the beginning, actually, just, just starting with, uh, some, some random questions.

And, uh, from that part of, uh, I met you guys, actually.

Emill: [00:01:00] Oh, well, what kind of app was it?

Bram: No, just the, the, uh, um, the, uh, chatgpt one.

Emill: Oh, chatgpt, okay, okay, okay. So someone told you to download that app?

Bram: Yeah, because, um, I was working out, uh, in a, in a gym. And the gym owner asked me, uh, can you write a review? And I was just typing it, just old school, uh, typing it in.

And some guy walked to me and said, you can just ask at JGPCR. I said, how? So that's why he described it to me.

Emill: Nice.

Bram: So, and then it just was copy paste. Yeah, as simple as that. Yeah.

Emill: Um, what concerns, if any, do you have about AI being implemented in your workspace?

Bram: Um, yeah, good question. I just, uh, yeah, I was just finding out about the AI stuff.

So I was just copying paste some of our text to use on the social media.

Ionut: Yeah.

Bram: [00:02:00] And my, my boss, the owner, he came to me. It was like Bram. Did you, did you really type this? I was like, no, of course not. So he was just like, yeah, but we don't talk this way to our customers. So that's, I, yeah, I just made a mistake because I just, yeah, it just, uh, it's not really with, I don't know, a kind of touch of a human actually.

It's just, yeah. Not the way how we speak to our customers. No, of

Emill: course

Bram: not. So that's why. *[Lack of human element, 1. Concerns about AI]*

Emill: But do you have any, like, maybe. Concerns around job replacement or like

Bram: anything of

Emill: the

Bram: sort? In our branch, I don't think because, um, it's, it's, yeah, it's still, um, uh, a human kind of, kind of job. So we really need our, our, our colleagues, but maybe in, in, in marketing in the future, uh, I'm not fearing

my job, but I think it's, for me, it's actually getting a career. *[Job replacement, 1. Concerns about AI, 2. Automation and job impact]*

More [00:03:00] easier, I think. Okay, yeah. Yeah, but not fully complete, no. How

Emill: do you feel like it could impact the jobs of your colleagues or yourself even?

Bram: Um, it's just with writing everything, sometimes I have to think about, uh, a social media post.

Ionut: Yeah.

Bram: With text, and I can just ask Chachibity how to write it or give me, you know, Quite some examples, so that's I like about a lot.

But I know I can do a lot of more things with with JetGBT or for instance, uh, like creating pictures or with heftworks or forklifts. But also making a newsletter, for instance. I'm working with that right now. So that's quite nice. And yeah, it's good. It's good. I think. So. Positive things. Yeah, for me, only positive things. *[Benefits of Gen AI, 4. AI benefits]*

Emill: Nice.

Bram: Yeah.

Emill: And have you heard from colleagues or peers, like anything about AI that [00:04:00] concerns you in any time?

Bram: Um, yes, I talked with my boss, William, and it was just the other week on news, um, about AI that there are also like certain things who are, yeah, quite dangerous. For instance, like, um, yeah, I was just speaking with you guys about it.

Yeah. With, uh, yeah, the faces of celebrities you can just input in your videos and then it's almost real. So that's quite, uh, quite bad, I think. Yeah, a bit scary. Yeah, *[Unethical use, 1. Concerns about AI]*

Emill: definitely. Do you think they're following up to what we're talking right now? Do you think there are any ethical concerns about AI?

Bram: Yeah, I know, for instance, like, or William told me, I'm not sure, but like, um, copying a face and put it in your video is actually quite bad.

Uh, not allowed and not in, not in the Netherlands. I think, uh, yeah. Do I have more concerns? No, not for, not, not for now. I think, but I'm not [00:05:00] So as far as you guys, because you know a lot of, more, many apps for Yeah. Uh, yeah. ai, the me, but yeah. I think with the upcoming generation, yeah, I, yeah, it's possible you can do a lot of harm Yeah.
[Unethical use, 1. Concerns about AI]

Without actually knowing it. So Yeah. That's quite bad.

Emill: So you do recognize there are some ethical concerns to it, which is true.

Now let's move on to another segment, which is, um, how willing you are to learn about this new technology. How would you say, how willing are you to learn about AI and its potential applications in your role?

Ionut: From a scale from 0 to 100, or is it just like that?

Emill: I mean

Ionut: Because we have like four, five choices.

Neutral in the survey questions.

Bram: I think for me it's a 9. I think I'm quite willing to learn about AI. I think the possibilities are [00:06:00] enormous. I see AI like a train. It's still going, going, going. I have to jump on the train to become a part of it, I think. Otherwise you're just too late. So, yeah, I see a lot of good things.

But, yeah, I was discussing with William and he also told me, Yeah. Perhaps it's possible, uh, it shuts down immediately in a couple of years and you're studying now something that's forbidden in the future. So *[Willing to learn, 3. Learning and adoption of AI]*

Emill: yeah, it's

Bram: possible.

Emill: That would suck. Yeah.

Bram: But do you guys think about it? Like, like how AI is growing and maybe the, the harms you can do with it.

And yeah, for instance, it gets shut down in part of some countries.

Ionut: Yeah, actually we, I, I personally thought about that and it was like, It is going to be much more rigid, like there are going to be more laws, laws that are going to be implemented. But I think it's gonna still [00:07:00] improve a lot on the medical part and analyzing human emotions to, I don't know, for psychopaths.

It has many applications good, it also has bad applications if you are a bad person. But I think it's gonna be a really tough battle for, uh, lawyers to put the laws in perspective. Oh, very difficult, I think. Yeah. Because the

Bram: lines are very thin, what's actually white and what's not.

Ionut: Yeah, and it's more like, uh, it's this fine line between, uh, ethical and legal.

Bram: Yeah, exactly. Yeah, for who is something ethical and for, you know, what's legal. Yeah, true.

Ionut: Yeah. And I think that's, uh, That's going to be like a really hard job for lawyers in the future to figure out how to implement these technologies in a safe way because there are going to be a lot of bad people doing bad stuff.

But uh, I still see a lot of potential [00:08:00] to grow this technology into something that's really useful. Maybe make it, uh, for example, not general access, but like we have public access, we For charge GPT, but make it local for one firm to have its own charge. GPT mm-Hmm, and so on. Probably that would be a solution, but it's still going to be AI at some point.

Yeah,

Bram: yeah. I actually saw, like, like I, we saw the, the, the interview was on the, on the TV actually. And then they were doing like, like a podcast with, with three humans. Just three, three random guys and, uh, one, uh, AI person. And they were talking and the AI had to respond on the, in the, in the podcast actually, like they were doing like a little podcast and they say like, okay, you can now, um, say something, uh, sarcastic.

And he was, he was just talking like, like you couldn't even hear. So it's, yeah, it's quite amazing actually. Yeah. It's a bit of a *[Benefits of AI, 4. AI benefits]*

Emill: double edged sword. [00:09:00] Yeah. Because you can use it to do so much good, but also it can really harm. Yeah, of course. Do some damage So that's why Knowing how to use AI ethically is really important, uh, because it can, it can really do some bad.

Yeah, I

Bram: can believe so. Yeah, definitely.

Emill: So they might, they might place limitations on, on AI in the future, right? That's just how it is. What barriers, if any, do you think might prevent you from learning AI, do you think?

Bram: Uh, there's so much, I think. Yeah. Yeah. You see like so many things you can use and. And, um, yeah, I think the optional are limit limitless, but I have to, yeah.

Just, uh, focus on one thing and just, just, yeah, I want to learn everything wide away, but it's not possible. So one at a time, I have to take, uh, a few steps back to definitely, I like a Photoshop a lot, and Photoshop also now generates ai. *[Limitations on learning, 3. Learning and adoption of AI]*

Ionut: Mm-Hmm, .

Bram: Uh, but Photoshop is so big and [00:10:00] so huge, and I wanna do everything.

And if something doesn't work, I, I'm like, oh, awful. And so, yeah.

Emill: fair.

Bram: So step by step I think. Yeah.

Emill: It's little by little.

Bram: Yeah.

Emill: Yeah. How do your concerns about AI uh, affect your, your interest in learning more about it, if there is any?

Bram: That for now, it's not actually, um, holding my, holding me back. I think I also, I don't know, maybe 'cause it's new and it's, it's very different and, um, no, it doesn't hold my me back actually.

Okay. I think. Good. *[Benefits of AI, 4. AI benefits]*

Emill: And for the last one, in this, uh, sector, could you tell me how you prefer to learn about new technologies such as AI? If there's any way. If you're an easy

Bram: answer, with AI, but, no, um, I think, I think with, with YouTube videos and, and things like that. Yeah. Okay. Um, for now it's going [00:11:00] great.

I'm learning a lot more actually. Uh, some of the notes I wrote, uh, the other day when I met you guys. So, like, I'm also going to be using now, like, uh, the, the Dal, Dal e. Ah, Dal e. Yeah, it's for creating, uh, pictures. Uh, but it's, it's also, like, uh, limited because I don't have the paid version. So, I only can, I was just trying it out with, uh, yeah, different kind of examples.

But, yeah, five times and then it says, yeah, your limit is here and not, not further. *[Willing to learn, Limitations on learning, Methods of learning, 3. Learning and adoption of AI]*

Emill: Yeah.

Bram: But, yeah. .

Emill: Nice. Well, glad to hear that. Yeah. We used the notes from the other. Yeah, definitely. That's very nice, . Yeah.

Ionut: And also, would you like to maybe take part in a workshop or like see how people are actually using AI to maybe not copy, but understand how you can use it yourself?

Bram: Yeah, I, I would love to. Yeah. I would definitely be open to, to go to work sport, things like that.

Ionut: Maybe in your own company or something. Small gathering or, [00:12:00] yeah,

Bram: yeah. I am not sure everyone in our company, um, can use or need to use it. Yeah, yeah. But, um, yeah, if it's *[Willing to learn, Methods of learning, 3. Learning and adoption of AI]*

Ionut: provided, you would like to? Of course.

Yes. Alright. So that's willingness. It's nice. Yeah. How,

Emill: how do you think your, your colleagues, like, how willing are they, are they open to AI at all, or?

Bram: I think they're open. Yeah. Like I told you, uh, previously when I saw you. Yeah, yeah, yeah. Um, our colleagues like the. Average age is 50 plus, I think. And I'm happy they can use Microsoft Excel and do it.

Because like, when you saw Case, like, he was sitting there, it was like, uh Yeah, he's like already 62, so that's why, uh But yeah, I think he's open for it, I think everyone is open for it. If they can work with it, I'm not sure. *[Willing to learn, Limitations on learning, 3. Learning and adoption of AI]*

Emill: Yeah, okay, but at least they're Trying, yeah, definitely. Open to trying to learn new things.

Bram: Yeah.

Emill: That's good. And how, how many, how much time would you say you're willing to allocate [00:13:00] to learning AI?

Bram: Yeah, for me it's as long as it takes, but I think, yeah, I, yeah, it's just a train who never stops. So I have to keep learning, learning. I would love if, uh, if I have some kind of base. That would be nice.

Emill: So like, Would you say you would be, you would like allocate maybe a certain amount of time or something? Yeah, maybe two, three hours a week, I

Bram: think. *[Willing to learn, 3. Learning and adoption of AI]*

Emill: Okay. Yeah. Fair, fair. Um,

and could you make a reason why you're willing to spend that amount of time?

Bram: Yeah, I'm willing to spend this amount of time because I think in the future I can, I can, yeah, regain my time back. You recognize

Emill: the huge benefits. Yeah. That's cool. That's good. *[Willing to learn, 3. Learning and adoption of AI]*

Now, let's go into factors that influence misconceptions about AI that you might have, maybe, who knows. [00:14:00] Like, uh, do you think the way AI is portrayed in pop culture and media has a significant impact in shaping employees perceptions of AI? Like, for example, uh, Ooh, good question. The robots taking over the world and such.

Yeah, yeah, I know. Such things. Yeah,

Bram: I Um, yes, I think, I think because, but maybe it's also like a Dutch culture because if I see something on TV, uh, like, uh, the typical Dutch, uh, average person who is quite, uh, I say about 40 or something like that, they believe it straight away. So you see like, uh, it's dangerous.

So, yeah. Okay. AI is dangerous. So yeah, but yeah. Does it hold me back? No, for me not, but I think the rest of the Netherlands, yeah, maybe a little
[Fear in media, 3. Learning and adoption of AI]

Emill: bit. You'd say in this country, it's, it's

Bram: No, if I see, I just was saying, if they see something on TV and they heard something that was bad, they start believing it straight away.

Emill: Yeah, everything.

Bram: Yeah, not [00:15:00] everything, but when, when the Most of the new, new centers, they say, then they quite believe it. Yeah,

Emill: that's, that's

Bram: real. Yeah, but we, we are a different kind of generation. So if we hear something, we can not going to believe straight away. We want to see, okay, where's from? Yeah. So it's, yeah, *[Fear in media, 1. Concerns about AI]*

Emill: doubt it a bit.

Okay. Uh, do you think, uh, management or leadership, uh, has addressed, uh, employee concerns about AI adequately in, in your, uh, space, in your company?

Bram: Um,

Emill: Why or why

Bram: not? Yeah, maybe a little bit, uh, because, um, my boss, I think he likes the AI, but not if I copy paste everything, it has to be a certain type of way.

And, um, because it's new, everybody has to learn. So it doesn't blame me, but I have to be more, uh, yeah, more concerned about it. Okay. So

Emill: it's been, it's been talked about [00:16:00] a little bit around, um, Yeah, yeah,

Bram: yeah. A little bit. Yes. Okay. Not quite much because I'm not sure, but I'm one of the few that actually use AI. *[Lack of human element, Addressing AI , 1. Concerns about AI, 2. Automation and job impact]*

Emill: Okay. Nice. And how do you see AI influencing the future of your industry and how do you feel about that?

Bram: Um, quite good, but my industry was like I told you before, it's, it's quite old fashioned. Yep. Everything is holding behind. If you are like a more than. Uh, company, we will be way back of way further than our, uh, uh, concurrence.

I don't know how to say. Uh, other brands than us, other companies than us, they do the same. *[Competition, 2. Automation and job impact]*

Emill: Okay.

Bram: Yeah. Um, but yeah, I see a positive, I think.

Emill: Okay, good. You can see, see how, since if, when you, if you know how to use AI, you can use its benefits, but The other companies also have that power to,

Bram: [00:17:00] yeah,

Emill: but they are not the same.

So,

Ionut: for example, like, uh, you can, uh, place cameras and, uh, automate some start tasks, for example, stopping the, what you told me, stopping the lift, uh, forklift when it sees a person. So it doesn't crush him.

Bram: Yeah, definitely. Um, yeah, we also see now, like, um, that are, um, without brand deodorant. They already told us, like there are actually now warehouses that don't have any employees.

Everything is with ai. So, uh, it's, it's also possible to, to actually buy a forklift with no person on it. Just the ai. And it's same with a, like, um, I dunno how to call it like a stove ci, like, uh, uh, it's, it's a mechanic you use in, in the house for a cleaning. Okay. They suck the store. I don't know. A no, it's not a boom, but a, a electric one. *[Automation, 2. Automation and job impact]*

Ionut: I know what you mean. And [00:18:00] we have that, our workplace. Yeah. Yeah. Everyone has it at home. Yeah,

Bram: right. But I don't know what the name is, but it's uh,

Ionut: the cleaner, basically. Right? Yeah. The cleaner. Exactly. Yeah. Robot Cleaner, I think what it's called like that or

Emill: Robot Cleaner. You

Ionut: don't know what I mean. Right?

Emill: You mean like the like um, the one that moves on his own? Yeah. Roomba. You mean?

Ionut: No, you have like The disc shaped, I think, right? Where

Bram: Like a,

Emill: like a disc shaped one. Like a circle.

Bram: Yeah, yeah, like a wobbled one that cleans the house.

Emill: Yeah, it's called a Roomba. Yeah, a Roomba, yeah. I

Bram: have no clue. Oh, yeah,

Emill: I can't check it right now.

It's R O O M B A.

Bram: I have the app.

Ionut: Yeah, also NVIDIA.

Bram: Vacuum [00:19:00] cleaner. That's what I mean. Ah, yeah, yeah, yeah. It's a vacuum cleaner. Yeah. Just a regular one. Yeah. Uh, no, an electric one, but that, but that one, uh, it's just going in the house like automatically. A vacuum cleaner is just, just a regular one. It's the robot. Yeah, it's a robot. It's a round one actually.

The round one. Yeah. *[Lack of human element, Automation, 2. Automation and job impact]*

Ionut: Yeah. That cleans the space. Yeah.

Bram: And I was using this as, uh, uh, uh, because with a forklift, you can do the same. So you can, you can recalculate from A to B fully automatic. Yeah. All automated. Yeah. Yeah. *[Lack of human element, Automation, 2. Automation and job impact]*

Ionut: NVIDIA has this system where it trains robots to, um, Go to place A to place B and they use cameras and if there is an accident somewhere they recalculate the route.

Bram: Oh yeah, yeah, exactly. So same with this one because every warehouse has also, besides a forklift or a pallet truck, they have like a boomer. It's actually cleaner so, um, he knows exactly the amount of space he has and where everything is. So, um, yeah, same with a small one but this one is [00:20:00] quite bigger. Yeah,

Ionut: and it scans the environment and knows exactly.

Yeah. Yeah.

Emill: Well, that was it for my list of questions. Do you have any questions you want to ask?

Ionut: Yes. Do you know about any AI technologies other companies in your sector uses?

Bram: Um, I'm thinking now. Yeah. Besides the things I already called, like, like, uh, uh, for instance, our, our venture is using it to, uh, ultimately.

Make a warehouse with no, with no, uh,

Ionut: humans.

Bram: Yeah, exactly. No humans. Um, I know that they are working in the same, uh, yeah, the train is going as fast as AI goes. *[Lack of human element, Automation, 2. Automation and job impact]*

Ionut: Yeah.

Bram: So, but it's, it doesn't harm us actually, because we are like the smaller companies. Yeah. Like the huge one, like a ballpoint comb, for instance, maybe, you know, it's online, uh, uh, shop where [00:21:00] you can buy everything.

They, they all use it.

Ionut: Yeah, yeah, definitely, yeah. And it's

Bram: also very expensive. It's not like, uh, it takes millions. Yeah, it's crazy.

Ionut: Yeah, it is quite expensive nowadays. Um, and my other question, uh, what's your view on, uh, the relationship between age and willingness of people to learn about AI technologies?

Like, do you think we've, uh, an increase? Let's say older people are tending to not learn about AI because they're more comfortable working as they are used to.

Bram: Yeah, good question. But I also think like the our generation is, um, is more open or is genetic. I don't know. But we, we always have to learn. It's not, it's like constantly, it's, it's, it's like generate definitely with technology, um, for you even more than my [00:22:00] generation.

But like for the, yeah, for the older generation, for like people who are like 50 or 60 or even 70, they are just used to do everything

Ionut: manually. Yeah,

Bram: exactly. So *[Willing to learn, 3. Learning and adoption of AI]*

Ionut: it's, uh, it's not about like, uh, they're not willing to learn, but it's more about the comfortable, comfortable doing it. Yeah,

Bram: we are, we are already in this place of learning constantly, but they are not.

So that's why it's more easier, I think.

Ionut: Yeah, if it gets the job done, that's good enough. So,

Bram: yeah, that's true. They're used

Emill: to the old

Bram: ways. Yeah. I, for instance, I have my, my grandfather, he buys, uh, uh, every four years, he buys a new car. It's, it's, yeah, I don't know why, but it's also drive like. Maybe 10, 000 in four years, kilometers, so it's nothing.

Ionut: So I was just

Bram: saying to him, like, just buy an automatic car. Why are you still driving a gearbox? It's crazy. And he was like holding this for like, for so many years. And I'm, [00:23:00] I was damn very young, so maybe he wouldn't listen. But now, I think he bought it last year I was with him to do the car deal. Just, just try it out.

If you don't like it, it's okay. But he's just, no, no, I want this, this, this.

Ionut: He likes automatic manual. He was driving

Bram: a one time. Okay. I'm taking automatic just like that. Yeah. Yeah. But I have to take him like, because he's not comfortable with it. Yeah. Okay. It

takes a little push. Yeah, exactly. Once they, yeah, now we never want to quit again.

So that's good.

Ionut: Yeah. Okay. That's, that's a good insight. Yeah. All right. Um, yeah, that's all from me, I guess.

Emill: Well, once again, thank you so much for taking the time to accept this interview for us. And, uh, yeah, that's about it. Thank you.
