

William interview quali

C van Geel Vastgoed B.V. 3

Ionut: [00:00:00] Um, yes. So we got this. We don't have anything else to. We, we are really careful with this because two of our team members forgot to give the consent papers to be signed. And they had to call the interviewers again to do it again, or maybe just get the paper signed. All right. Um. So thank you for taking part in our study and thank you for being for having us today here.

Um, I'll, uh, I have an introductory question. Uh, can you briefly describe your role within your company and how familiar you are with artificial intelligence?

William: Okay. Uh, my role is, uh, uh, I'm responsible for the whole company. Every detail in the company, every, uh, uh, uh, uh, guy who works here. Uh, uh, I'm, uh, uh, yeah.

Responsible at the end, um, [00:01:00] that's what I, uh, what I do. Um, and artificial intelligence is, yeah, I know what it is, but it's not used in our company. Uh, as far as I know. Yeah. All right. Yeah.

Ionut: Yep. Thank you. Um. Now we'll talk about concerns and misconceptions about AI. My first question here is, what concerns, if any, do you have about AI being implemented in your specific workplace?

The

William: thing with AI is, I think, the lack of the human part of it. The emotions, the, uh, uh, You can use it on a good way, but you can also use it in a bad way. Yep, definitely. And that's, yeah, that's a concern. Yeah. I don't know how that's gonna develop. *[Lack of emotions in AI, 1. Concerns about AI]*

Ionut: Yep. All right. And using it like, uh, not using it [00:02:00] properly or misusing it like for writing bad stuff or, Um, what's, uh, what is more a concern?

Not, uh, the feelings, like not, uh, putting human feelings inside the text or,

William: Um, it depends on, on, on, um, what way AI can help us. If it can help us to, uh, make processes easier, then I'm not concerned at all. But if it's, uh, for example, with, uh, HR, with human people, uh, um, private, uh, uh, Cases. Yeah. We don't want them out of the open. *[Privacy concerns, I. Concerns about AI]*

Yeah.

Ionut: Yeah.

William: And if I put things in AI, like chat GPT, where is it? Who has it? *[Privacy concerns, I. Concerns about AI]*

Ionut: Who has access to it? Yeah. It's going to be saved in a database probably. Yeah. And they're going to [00:03:00] use it to train their model again and again. So yeah, that's a, that's a concern. Um, all right. How do you feel AI could impact your job or the jobs of your colleagues in the future?

William: Uh, I think, uh, AI can help, uh, uh, uh, uh, uh, broomm with our websites with social media, uh, uh, uh, uh, Uh, imagine, uh, things, uh, uh, uh, uh, How do I say

Ionut: it? You can also say some things in Dutch. Yeah, you

William: can translate later. But I can try it in English. I mean, if you want to post something on the internet, it's difficult to find new interesting things.

I can help you with suggesting uh, uh, uh Interesting things.

Ionut: Yeah.

William: So and that's why I think it can, it can [00:04:00] help. Um, but we also, uh, have to, uh, put a lot of data in a computer. Um, yeah, I think there in the, in the future, uh, there will be, uh, uh, things not necessary anymore because AI can do that for us. *[Automation, 2. Automation and job impact]*

Ionut: Yeah.

William: And yeah, look around you. Uh, we have, uh, all trucks, uh, uh, who needs a driver. Yeah. But yeah, uh, within a few years, the driver is not needed anymore. *[Automation, 2. Automation and job impact]*

Ionut: Yeah. Might be, might be true. It is

William: already there. Toyota already has, uh, automated, uh, guided vehicles. Yeah. So, and, and it's, it's already there. It's only, uh, expensive. *[Automation, 2. Automation and job impact]*

Yeah. It's, it's still, uh, um,

Ionut: In a testing, uh,

William: now it's, it's, it's, it's really working, but, uh, the standardization has to be very high. Uh, it has to be the same pallet with the same weight to the same height, uh, on the even floor, [00:05:00] uh, not going outside. There are all restrictions, uh, uh, with that. And I think that's gonna develop, uh, uh, uh, uh, fast.

Yeah. And that's the, the, the, the trucks also, uh, uh, have an, a form of, of IA, uh, uh, within the truck. Yeah. So, uh, uh, it's not only the, the, the, the, the mission to go from A to B, uh, but he can, uh, um, self deploy. Uh, okay. Now I have to go to A and then to D and then to Z. Oh, okay.

Ionut: They also have this incorporated.

William: Yeah.

Ionut: All right. Yeah, I think Bram mentioned something similar to that with the, yeah, okay. Um,

William: and for me also in small things. And that's where, uh, after the, the, the presentation we got, yeah, I, uh, uh, uh, took Ty pt, uh, and I took the, uh, uh, the pro version. Uh, yeah. Um, if I, uh, if we have a meeting, uh, and I [00:06:00] have to, uh, prepare, uh, uh, uh, a small talk or something, AI, GPT can help me, uh, uh, to put a text together, uh, which I, the past few years, I have to make it up my own mind.

And now I can say, okay, uh, I have to, uh, talk and I want to talk about, uh, uh, we need more profits. And I, uh, and then Chet GPT makes a, uh, a story about it and then, uh, um, I can make it my own. The text from, uh, Chet GPT putting directly, uh, uh, in a speech is, yeah. It's missing something and I can tell him, uh, uh, make a little joke. *[Benefits of AI, 4. AI benefits]*

Uh, uh, last week it was on TV. And did you saw it at, uh, uh, uh, the television at, uh, they had a program called Renze. It was Sunday night. They, uh, had the American AI. Um, and, and, uh, you know, the

Ionut: podcast or

William: no, it doesn't have a podcast. [00:07:00] Uh, it's a talk show and there are several guests at the table and AI, uh, also, uh, got a seat and, uh, he was invited to, uh, uh, Among the discussion,

Ionut: and

William: they said to him, uh, okay, anything you like, you can, uh, abrupt, uh, somebody and ask a question, uh, give an explanation.

And they also, uh, uh, taught him, uh, uh, make it funnier. He's, uh, Started making jokes. . . Yeah. Uh, uh, making it annoying. He was whispering at the moment. , you can ask him anything and, and it works.

Ionut: Yeah.

William: And, and the, the voice, it was the, the new generation voice of chat. G pt. Mm-Hmm. . Yeah. It, it, it, it can laugh. Uh uh, it make the sound like Yeah.

Just like a normal person. Yeah. It was quite, uh, quite real. Uh.

Ionut: Yeah, it feels real and it feels like there is another person at the table.
[00:08:00] Yeah,

William: yeah,

Emil: yeah, yeah.

Ionut: Uh, the thing with, uh, this is a parenthesis, uh, maybe to get a new insight in AI, uh, large language models like charge PT and that one you just mentioned, uh, they, uh, I don't think they have reasoning.

They don't quite, they're not capable of solving problems. For example, you can give it a. And to count the R letters from strawberry, from the, from the word strawberry and say how many R letters are in the word strawberry. He will say like four or two or one, but it gets the answer wrong because he can't reason like us with humans, but he puts words together and anticipates what he should be saying.

So it's basically predicting what somebody would say in that scenario.
That's how it works.

Emil: So it, it, it like kind of like. Translates the words into codes. Yeah. Doesn't know the word, the code for strawberry is only straw. And then Berry. [00:09:00] Yeah. So it's more R's than it actually is. Yeah. It's just been fixed though since, since then.

Ionut: Yeah. They are working on reasoning models, like to solve problems and all that stuff. Yeah. It's, uh, it's still in development, but it will be sometime. At some point, you will not distinguish a person from another human. Yeah. Yeah,

William: that's, uh, that's. Only a short time, I think.

Ionut: Yeah, quite a short time, maybe two, three, four or five years.

William: Now, if you see two years ago and now, the progress is huge. It's, yeah, it's really, really big.

Ionut: Yeah. Yes. Um, yes. All right. Uh, how do you feel AI could impact your knowledge? I, I think I, no, I read that one. What have you heard from colleagues or peers about AI that concerns you? Misusing AI and

William: I did not heard anything from colleagues.

I know there are some risks at AI, but that's not something which is at the [00:10:00] table right now.

Ionut: Alright, okay. Uh, do you think there are ethical concerns around AI? If so, can you elaborate on what these are? Um, do you believe your company use of AI tools puts your current job at risk?

William: Uh, no, I think not the, the, the total job, but if you, uh, we are with 30 people here.

Ionut: Mm-Hmm. ,

William: um, in a normal growth process, it would be, uh, uh, 35, uh, in, in, in five years.

Ionut: Yeah.

William: Uh, maybe now it's still 30, uh, in five years because some tasks

Ionut: are being, are

William: being overtaken by, by, uh, ai.

Ionut: So [*Automation, 2. Automation and job impact*]

William: it's not that I think that anybody's job is in, in, in danger, but I think we can, uh, uh, uh, grow without more people.

Ionut: Yeah. Okay. So it's, uh, staying consistent with, uh Yeah. That's an interesting answer. Yeah. It's a new insight. I didn't think about that, to be honest. Okay. [00:11:00] Yeah. Okay. Nice. Um And, uh, now we are going to talk about the willingness to learn about AI technologies. My first

question here is how willing are you to learn about AI and its potential applications in your role?

William: I'm very interested. On a scale from 0 to

Ionut: 10?

William: I think it's an 8 or a 9, uh, because, uh, uh, I really got the, the, the, the, the insight that, uh, uh, If I get into my car, uh, my car already says to me, uh, should I drive home? Because he knows every day at about five o'clock I get in the car and I drive home. So that AI is still there.

It's already there. Um, and that's, yeah, uh, already a common thing. And, um, I, yeah, before the, the, the meeting at Avance, uh, I was not aware of that, not enough aware of that. And, uh, [00:12:00] now I thought about it and I think, yes, this is the time to step in and to get familiar with, with AI, because if I don't do it right now, I will be a real boomer and I'm walking behind and I don't want to walk behind. *[Willing to learn, 3. Learning and adoption of AI]*

In my, uh, profession, uh, I'm not allowed to work behind. I have to know what's, what's in the market. Yeah. Um, uh, what's with the people, uh, uh, how do I keep people motivated? How do I, uh, can, uh, get, uh, uh, the people, um, Satisfied and, and not worrying about AI is going to take my, uh, profession.

Ionut: Yeah.

William: That's also my role in, in the company.

Ionut: So I,

William: I, yeah, I think I have to know a little bit more than the average person.

Emil: Yeah. All right. Yeah. Could you recognize that? Sorry? It's good that you recognize that.

William: Yeah. Yeah. I think, yeah. Yeah.

Ionut: Yeah. It's, uh, it's nice. All right. [00:13:00] Uh, yes. What barriers, if any, do you think might prevent you from learning about AI?

Lack of time, for example, lack of resources. Uh,

William: uh,

Ionut: overwhelming of so many Applic. Lack

William: of knowledge.

Ionut: Lack of knowledge.

William: Yeah. Uh, okay. There's ai It can help me. How, but how, how can it help me? What, what, what can, what can it do? Mm-Hmm. . I do, uh, uh, uh, many things on a day, or which things on that day can be done by AI or, uh, uh, uh, uh, prepared by ai. *[Lack of knowledge to learn, 3. Learning and adoption of AI]*

So I only have to finish it. Yeah. Yeah. That's something I have to, uh, uh, uh, uh. Uh, yeah, think about, think about, yeah. Mm

Ionut: hmm. Yeah. Okay. Uh, yeah, that's good. Uh, lack of, uh, knowledge. I had a question in my mind, but I forgot it. Oh, no, it's, uh, I finally

William: asked chat GPT, uh, tell me how to use [00:14:00] you. Yeah. Yeah.

That's, that's a good one. And that's, uh, uh, uh, uh, a very wide question. Then I get a general answer, general answer. Uh, but you, you first, before you get an answer, you have to really think about the question. Yeah. And, and, and, uh, what, what do you think that the, the, the solution will be

Ionut: and,

William: and put the prompt in, in, in chat GPT correctly.

So, uh, he knows the ways to go.

Emil: Yeah. You can tell him the different tasks you do in a Yeah. And then ask him, how can I, Use AI or ChachiBT itself. Yeah. To automate those tasks. Make it better. Yeah.

Ionut: And explain everything like step by step. Once you see like, uh, I can help you with this. And ask him, okay, step by step.

Uh, very detailed. Explain it to me. How to use you on this task. And it will give you like a [00:15:00]

Emil: small tip. You have to be specific sometimes. To give the results you want. Yeah, you can go that, that's

William: something I really want to, to, to research. Uh, but then time is, uh, also yeah. A thing because, uh, uh, people all, yeah, put questions at me and that's, yeah. *[Lack of time to learn, 3. Learning and adoption of AI]*

That's also, uh, uh, work I have to do. Yeah. So it's

Ionut: a little bit lack of time to sometimes lack of

William: knowledge. Where is the knowledge? Where can I get the knowledge that that's the main problem? I think, uh, for me right now. Yeah. *[Lack of knowledge to learn]*

Ionut: Okay. Okay. Um, with the next one, um, how can you tell me, no, can you tell me how you prefer to learn about new technologies like AI, for example, courses or videos, tutorials on YouTube or.

Uh, seeing somebody really doing it in real time or on your own self paced. [00:16:00] Yeah,

William: the self paced is what I'm doing right now. Uh, and yes, on YouTube or that kind of things, you can find, uh, uh, uh, all kinds of, of, of, uh, uh, yeah.

Ionut: Explanations videos.

William: Yeah. Uh.

Ionut: Yeah. *[Methods of learning, 3. Learning and adoption of AI]*

William: Yeah. Yeah. The, the problem with, with that is that it's, it's very wide also, and you have a, a specific, uh, a question in your head and that's what you wanna do.

And, uh, finding information about that task, yeah, that's quite complicated. And then it's your GT himself, uh, uh, is, is a right, uh, uh, uh, uh, source to, uh, uh, yeah, explore the question. *[Methods of learning, 3. Learning and adoption of AI]*

Ionut: I'm noting an idea I came up with right now. It's not related to the study. But your mind

William: is working right now. Yeah, because

Ionut: what you mentioned right now, I was thinking about making something like a library of AI, where you can search exactly your role or your field and see how you can [00:17:00] apply technologies in your current job.

For example, automating stuff, uh, messages, emails. All that, uh, just make like a tutorial, like a library, you go pick a book and see what can I do here with AI. I was thinking about something like that, but that's totally different from my study. Yeah. Okay. It's a good idea, I think. Yes. It's, uh, helping people to, uh, accommodate with, uh, new technologies basically.

William: All right. I just also ordered a book for AI. Yeah. Yeah. It's the Dutch guy, Alexander clipping.

Ionut: Yeah, I know him. Yeah.

William: Yeah, yeah. Uh, uh, he, uh, and I think it's an, an English man or American, uh, who got a new book about, uh, ai, especially Jet GPT. Mm-Hmm. . And, uh, uh, I ordered it on Amazon. Uh, so it's coming. Nice.

Um, I'm, I'm interested and, uh, it's very old fashioned to order a book. Uh uh, no de about something. It is valid. [00:18:00] *[Methods of learning, 3.*

Learning and adoption of AI]

Ionut: Me, myself, I'm reading books for chess, for example. It's not that old fashioned. I don't spend money on it. I got it from my library from school. I would buy that only to have it like in my collection.

It looks nice and it's nice to It's nice to have something like you can grab, open it at the exact page real quick. You don't have to go to the phone. Maybe you don't have battery.

William: What triggered me, the layout of the book was a little bit old fashioned, like Windows 95 or something. And, uh, uh, Alexander also taught in that talk show.

Uh, um, your, it's, it's, it's, uh, almost like you have to learn again, how to use a computer. Yeah. My generation, when I was your age, a computer was, yeah. It was there, but it was not a common, a common thing. Uh, uh, I only had the, the notebook literally, uh, this, uh, uh, yeah. And now it's, [00:19:00] you have to do it again.

This by book is, is, is maybe a good option. Yeah, yeah, definitely.

[Methods of learning, 3. Learning and adoption of AI]

Ionut: Okay, that's coming next

William: week. So, uh,

Ionut: so that's a preferred way to learning about AI. So learning, uh, reading about AI too. Yeah. Yeah. Okay. It's, it will be a follow up question. So you can mention that again, if you feel like it. Um,

it's scrolled way below what I was. How do you, um,

did we talk about willingness to learn?

Emil: We were just talking about it.

Ionut: Like what barriers, if any, do you have? Yeah, I asked that question. Yeah, the lack of knowledge, yeah. Can you tell me how you prefer to learn

about new AI technologies? Yeah, I think that was a follow up question. Yeah, okay, no, I told you all about the book.

Yeah, okay, yeah. And chat GPT, yeah. It responded to my question also. Um, [00:20:00] follow up question, would you Yeah, there is an alternative question here. How much time are you willing to spend on learning new generative AI tools per week? How much time can you

William: spend? That's a difficult question. I didn't thought about that already.

Uh, yeah. Maybe one. At this time, I'm quite enthusiastic about using it. So, uh, maybe two hours a week or something. Uh, uh. *[Time spent, 3. Learning and adoption of AI]*

Ionut: Okay. Yeah,

William: to, yeah, to really want to, uh, uh, know more about it

Ionut: and, uh, there is like lack of time a little bit, so you can't, if you had more time, you would work on it more, right? Yeah.

Yeah.

William: Uh, if, if some tasks are taken over by, uh, uh, AI, uh, I will be have more time to, uh, learn about the more difficult, uh, uh, tasks, uh, uh, they are. Yeah. Okay. And then that, that, uh, [00:21:00] uh, amount of time, uh, can increase. Yeah.

Ionut: Yeah. Yeah. So you basically save time. You save time by, uh, you invest a little bit now, but you get some much more profit.

Yeah. If it's working. That's the, uh, uh, uh, that's the benefit. Yeah.

Emil: Working might get that time

Ionut: back. Yeah. Yeah. Yeah. Uh, and could you provide a reason to why you are willing to spend so much or so little time, so much time?

William: That's what I said. I think it's, it's, uh, uh, it's going to be something, uh, which is integrated in our life and our work.

Uh, and I won't, I don't want to be a walk behind. I want to, uh, uh, walk now, not in front, but at least in the middle,

Ionut: keep up with everyone. Yeah. All right. And now we are entering, uh, the factors influencing concerns, the factors that are influenced.

Misconceptions, basically. [00:22:00] Um, do you think that AI is portrayed in pop culture and media has a significant impact in shaping employees perceptions of AI? For example, like looking at news, you see some news saying AI is bad used and people are generating images of actresses doing something that they don't do.

Or, uh, do you think like, Um, the way it is portrayed in, uh, media, it's shaping employees perceptions over this.

Emil: Like in pop culture, like in movies, and they're saying robots are too powerful and stuff like that. Yeah, yeah, yeah. Terminator, yeah.

William: Um, yeah, I think that's true, that, that, that, that, that is a, a, a Influence. Yeah, influence, and, and that could work in a bad way. Mm hmm. And, uh, um If you're an actor, uh, your, your, uh, profit is, [00:23:00] is, is to act. And if I is gonna act, uh, uh, yeah, you're useless. So that's, that's quite an impact. Yeah. And, uh, um, uh, right now on, on social media, if I see something, Yeah, it's what I'm seeing.

Is that real or not?

Ionut: Yeah, yeah, that's also a thing going on now. Yeah. And, uh, you think that, uh, people, peers around you, uh, have a negative view on AI because of, uh, media? Of, uh, how it is portrayed

William: everywhere? Um I think it's, it's, uh, uh, uh, for the most people, funny to see, uh, uh, things who, uh, which aren't real and knowing it's not real, but, uh, uh, it can also be, uh, uh, uh, used in the wrong way.

If I make a fake movie, [00:24:00] uh, about a colleague who's doing something ridiculous and I put that on, on our social media, uh, that's going to be really bad. *[Malicious use, 1. Concerns about AI]*

Ionut: Yeah.

William: So, so, and that option is, is available.

Ionut: Yeah. It's,

William: you can't, uh, uh, uh, uh, erase that or something.

Ionut: Yeah. There is, uh, always, uh, a misuse in Yeah. Greater tools.

Give you,

William: yeah. And I've got a son, uh, uh, always, uh, 12 years old is, is only, uh, uh, uh, swiping on TikTok . Uh, there are so many, uh, movies over there. Yeah. Which I think, uh, yeah, I don't think that's right for you to see.

Ionut: Yeah, it's distracting. Yeah. Yes. Uh, yeah. Me myself to make it a little bit personal. I, uh, stopped using Instagram because I find myself like scrolling endlessly at some point, like one hour of scrolling and not doing actually anything.

Yeah. And I had homework where I had need to take my clothes out the, uh, washing machine and I forgot to. Yeah. Yeah. Only

William: because you think the next move, the [00:25:00] next, the next, the next. Yeah. You give a,

Ionut: you get a little bit of, Do dopamine. A little bit of joy. Yeah. Yeah. I

William: know that. Yeah. Your mind is stuck inside that.

Yeah. Yeah. Gets satisfied every time again.

Ionut: Yeah. Yeah. That's actually a mis uh, misuse of AI to Yeah. To put, yeah. It's, yeah.

William: There's also a form of, of, of ai, of course, the thing Exactly. Knows or want, which movies you want to see.

Ionut: Yeah. Algorithms. Yeah. What you like and what you don't like. What, yeah. Yeah.

All right. Um, do you think management or, or leadership has addressed employee concerns about AI adequately? Why or why not? I have a hard time understanding this question myself. Can you help me? This one, like, do you think management or leadership has addressed employee concerns about AI adequately?

Emil: Without being yourself, right? So,

William: yeah, in this case, yes. But what is the question?[00:26:00]

Emil: if the, the management, so yourself has addressed any, like problems or concerns that AI might affect this company as a, as a whole? Oh,

William: that, that we talk about it in, in, in with our colleagues? No, actually, no, no. The only person I, I talked with is problem about, uh, ai because that's, for me, the first step in our organization to use ai. *[Has ai been discussed, 3. Learning and adoption of AI]*

Emil: Yeah,

William: it's a start and yeah, of course, uh, uh, that's development, uh, developing very hard. I think, but yeah, I don't know how. Yeah. Not yet.

Ionut: All right. Uh, exploring general perceptions of AI. This is the next topic and it has only two questions more. So we are getting there. How do you see AI influencing the future of your industry and how do you feel about that?

William: Yeah, I already told a little bit, huh? We are selling trucks who need drivers [00:27:00] so trucks are developed around uh, drivers, so it's

comfortable, it's safe, all that kind of things, but I already see our competitors where, uh, a, uh a, a steel square with, with, with some forks drives around in the warehouse. Yeah.

And that's the job being nice or not being safe or not being, it's just a work tool.

Ionut: Yeah.

William: And that's a really a game changer for our, uh, uh, industry, I think. Yeah. And that's developing very hard. Uh, we are official, uh, uh, Toyota dealers. Toyota is, is, is one of the top, uh, uh, inventors about, uh, uh, uh, uh, automatic guided vehicles.

Yeah.

Ionut: Yeah.

William: But if they are going to win the game, I don't know, maybe software companies are the [00:28:00] game winners. That's also a possibility. *[Benefits of AI, 4. AI benefits]*

Ionut: And

William: that trucks developed for drivers, yeah, lose the game.

Ionut: Do you think, like, is it better to have a person driving the forklift so you can communicate with him in a natural language?

It's like Uh, Hey, I want you to move this there, or is, that's not required. I, I,

William: I've got already a, a, a, a, a few customers who have, uh, uh, automatic guided vehicles. Mm-Hmm. Um, so, um, for standards, uh, uh, uh, uh, processes. Yeah. Uh, it's ideal. It's nice, it's ideal. Mm-Hmm. , uh, pick it up here. Uh, drive it towards there.

Put it down. Get the next one. It's stupid to put a person to do it again and again. Yeah, it's always the same. But if I look at our warehouse, there's

nothing standard. Every new task is something else. That's not possible at the moment [00:29:00] to get the right truck and think about, okay, this is needed for that.

Yeah. I think there's a real gap before we get to the point that that's a solution.

Ionut: Yeah, alright. And the last question. What benefits do you think AI could bring to your role or workplace, if any?

William: Um, Yeah. Uh, uh, the same, uh, uh, uh, um, the, the vehicles will develop, uh, uh, uh, uh, uh, automated, uh, if we, uh, um, can get, uh, the knowledge to do that on the right way.

Uh, uh, yeah, then we can, uh, uh, uh, uh, exist. Uh. Another 20, 30 years, uh, uh, in the future. Yeah. If not, and, and AI is taking over, uh, uh, uh, yeah. Maybe in [00:30:00] five years, uh, we have to do something different. *[Benefits of AI, 4. AI benefits]*

Ionut: Yeah. I don't know. It's, uh, job shifting, like

William: Yeah. That, that, that, that's possible. That the guy who, uh, uh, gave the course at the, uh, uh, uh, at a v uh, was a website builder and he said, yeah, in five years, uh, uh, I'm done.

I'm done. . Yeah, I'm done. I have to do something different. Hm. Yeah. Yeah, it happens. Yeah. Yeah. It happens

Ionut: like, uh, at, uh, automated, uh, bank, uh, when you put money inside and get money from your card, you know, what do you mean the bank spots? Yeah,

Emil: the

Ionut: At m ATMs. Yeah. Yeah. The ATMs, for example, it used to be people doing this, like you go, you, you, you give them your bank account, they give you the money you want, like, you want \$100, you'll, they'll give it to you.

But now we have ATMs for. Couple of years, like 20, 30 years already. And, uh, there are no more bankers that are doing this. Yeah. You have

William: to get to the safe and then get the money and [00:31:00] give it to you. Yeah. No, it's, it's in a small box. Yeah. And, and yeah, uh, the technology will, will, uh, uh, develop that. I don't have cash money.

Uh, it's not necessary. Uh, there will be, uh, developed on a different way. Uh, uh, My phone, yeah. Yeah, we are already doing this.

Ionut: I don't think I saw cash. I didn't pay cash for like two years already. Okay. We are already getting there at some point. I hope. I mean, I did once.

William: I went to Croatia for a holiday.

It's a different country. It's very touristy. But there they really want cash. It's about taxes and all. I know what's behind it. But on the parking lot there is an ATM. And they send you outside to go get cash money and pay it inside.

Ionut: Yeah, it's about cashflow. I don't know. I don't [00:32:00] know. Finances, taxes,

William: cash money doesn't, uh, completely exist.

Yeah. It was a busy night. It was, uh, uh, uh, uh, an easy, easy night. Today we made a thousand dollars, but in the, in, in, in the pocket, there's 3000. And then you only have to pay taxes about a thousand, not on the tree. True. True.

Ionut: Yeah. That's, uh, that's also a thing.

William: Yeah. And that, that's the. In, in, in, in the Netherlands, uh, uh, we are so used to, uh, paying with, with card.

Yeah. Phone or a watch, uh, all the

Ionut: time you lose track of how much time, uh, how much money you spend sometime.

William: Uh, yeah, yeah, yeah. It's only plastic. It is, uh, yeah, it doesn't, it's not paying. It's just keep your phone, uh, against the, uh, portal. Yeah. Because

Emil: you actually see how much you're giving out. Oh, you feel it.

I

William: only see two notes. You really feel it in real time. Yeah.

Ionut: And, uh, I also have [00:33:00] two more questions. Those are on my side. Um, Do you think age is associated or correlated with the willingness of people to learn about AI? For example, do you think older people are You are not going to, are less willing to learn about AI because they are used to do things the old way and if it works, it gets, if it gets the job done.

William: I think that's true. That's always been. Same with computers. If I look at my parents, computers are still something new. And if I look at my child, why do you live without a computer? How is that possible? Age is a thing, yeah, for sure.

Ionut: All right. And I think, uh, I think, uh, Yeah, I think that's quite [00:34:00] it. I don't have any other questions.

This was my last one. Okay. Thank you so much for participating in our study. Yeah. I'll stop the recording and, uh, yes, thank you. Okay, thank you.
