

Youri transcript

2024-10-11 11-11-33

Emil: [00:00:00] Are you able to add the PDF or No,

Youri: I'm in the PDF. Yeah. Giving yes to everything. Oh, okay. Cool. Cool.

Okay. And then underneath on the bottom, I have to sign, I think. Right.

But, uh, how do I do that, man? Mm, right.[00:01:00]

You can do, uh, commentary.

Emil: Yeah, that's fine. That's fine. We can also, I've, I've started recording. So you can give your verbal consent as well, maybe.

Youri: Oh, well, here you go, man. I consent, uh, with this form that you just sent me.

Emil: Okay.

Youri: Yes, to everything.

Emil: Okay,

Youri: cool.

Cause right here, I don't see the option in it.

Emil: Yeah, it's a bit hard. The other interviews I conducted were in person, so they were able to, like, sign themselves. But this one is Yeah.

Youri: Wait, I think I got it. So we're checking straight on. Okay.

Signature. [00:02:00] Okay. Uh, I think I figured it out. Do you want me to, uh, do it? Or are you already good? If

Emil: it's possible, then that'd be, that'd be great. Yeah. Okay.

Youri: Dates. Eleven, ten.

I don't know. It's not, uh, Yeah.[00:03:00]

I'm fucking it up, uh, Emil. What's up? I'm messing it up. Look, I got, uh, let me see here. Show you what I got. If I can turn the camera around.

Emil: Okay.

Youri: I've been able to put my name on my signature.

Emil: That's great.

Youri: But then, uh, here I go to date. Because I did it a bit firmar. Right, right. But here it doesn't give me this option in date.

Oh. So I need the command to be higher. Aggregate Textile. But this, for that you need a special version of, uh, Adobe. Um,

Emil: I think you can, you can skip that one then. I'm not, I need your signature. But here it says like Textile, you know.

Youri: [00:04:00] But. You see, text stop. Yeah, yeah, I can see, I can see. But I need to have a special Acrobat Pro, you know. Don't worry

Emil: about that then, yeah. The most important part is your signature and your name, and you're giving his consent.

Yeah, all right. So I just save this and I send it to you? Yeah, yeah, that's, that's perfect, yeah.

Youri: Let

me

see, where do we have this?

Okay, there you go.

Emil: Okay, perfect. Thank you very much [00:05:00] for that. No

Youri: worries.

Emil: Alright, um, I will start the, uh, interview now. Yep, do it. Um, if you'd like to, uh, state your name and your position. Robles in your company.

Youri: Yeah. Um, you re Johnson owner of a happy houses, Barcelona.

Emil: Amazing. First question for you. Uh, what is your overall perspective on artificial tangents right now?

Youri: Uh, business wise. Just the, the perception you have in general? In general. General. What's the perception you

Emil: have?

Youri: Alright. Okay. Okay. Yeah. 'cause that's a difficult question to give one answer. 'cause I think business wise it could help us. Yeah. With lot of physical work you have to in person. But for example, with descriptions or making listings, improving photos, I, proofing, [00:06:00] layouts, whatever, you know, it can help us in many ways,

Emil: of course. *[Benefits of AI, 4. AI benefits]*

Youri: Um, in, from a general perspective. Honestly, I'm not a big fan. I'm sorry. Um, but I think with all technologies Uh, it's all about how you use it, you know

Emil: Of course

Youri: many times good things get invented and later will be used for a bad thing. So And I will think like we're already happy enough, you know, it's

like let's just not do it That's a little bit So I can see it can help us in some ways, you know, *[Unethical use, 1. Concerns about AI]*

Emil: yeah Um, I mean, say, say whatever pins you have to be as honest as you can.

This is good data. So,

Youri: yeah, yeah, yeah, of course. Yeah, no, no. I just, it's the same as like, uh, the invention of the mobile phone, you know, like it was there to help us because we end up all working while we're on holidays, for example, you know, so, Hey, I [00:07:00] may, we don't see it now. I know we can't imagine yet what it will be.

But, um, I just think we don't need it to live our lives. Yeah. I, I, why, why take the risk? You know, it's cool that we can do optimize things, but in general, we also got computers since 40 years, but that would speed up everything. But in the end, we're not working less, you know, it's the same thing. Yeah. We just wasn't a screen all day, you know?

No. So. So in general, all these things, uh, the benefit goes to the ones, uh, not to the general people, you know, these kinds of things, you know, in the end it's about, there's a lot of money involved and the ones doing the investments in it, they want to get something back for it, you know? So I don't believe that it's being [00:08:00] developed for us.

That's 90 percent of the population, let's say. I *[1. Concerns about AI, 3. Learning and adoption of AI, Against AI]*

Emil: understand. I understand what you're saying.

Youri: But what danger exactly? I don't know. I don't know. I think the sky's the limit, you know. You know, it can be anything.

Chips, robots, uh,

Emil: there's a lot of, there's a lot of harm that can be done through. Yeah, exactly. Yeah. I, I obviously. I also, I'm

Youri: like, you know, when you mentioned that we'd start replacing judges, big super conspiracy theory, but I mean, the sky's the limit, you know, like everything, there's many, many

Emil: things.

Yeah. I mean, it's possible, but I don't think that's going to happen anytime soon. I'll say that. Yeah. But, but, um, [00:09:00] I mean the, the. How to ethically use AI is also a really important thing. That's something they teach us a lot. Yeah, because obviously AI it's kind of like a double edged sword. You can use it to to benefit yourself or your team or whatever in many ways Yeah, it can also be done or used to be done or do harm So gotta be gotta be careful with that Yeah But yeah, uh moving on

What sort of concerns might you have regarding the implementation of AI in your business operations, if you have any?

Youri: Concerns,

Emil: like

Youri: worries, huh? Like, uh, not for me business wise. Well, yeah, my only concern is, uh, like I'm 42, you know, not old, but to learn new things [00:10:00] is more challenging than 10 or 20 years ago.

So, but, uh, I like the idea of being more effective, of course, you know, but, uh, the studying, you know, the beginning basically would be the hardest.

[Limitations on learning, 3. Learning and adoption of AI]

Emil: Okay. And how do you envision AI impacting your role as a business owner and the roles of your employees in the future?

Youri: Well, I would, uh, impact us more and more efficiency, uh, faster and maybe a little bit of, uh, steering, more control of the employees and the things that they have to do.

Emil: Yeah. Yeah.

Youri: Sometimes employees, they have trouble managing their own agenda,

Emil: right? Okay.

Youri: So maybe I could, it could take some of my job in.

Check this, check that, you know what I mean? To have a, like, workflow control. *[Benefits of AI, 4. AI benefits]*

Emil: Right, you can [00:11:00] streamline

Youri: everything

Emil: a little bit more. Yeah, yeah, yeah. I

Youri: suppose, okay.

Emil: That would

Youri: be, that would be nice. Well, thanks.

Emil: Um, are there any ethical considerations you believe are relevant to AI in your business? If so, could you elaborate, if not, then?

In

Youri: my business?

Emil: Yeah.

Youri: Hmm. No, I don't, uh. Wow, but, uh, *[1. Concerns about AI, No concern]*

Emil: I could pose an alternative. Do you feel that adopting AI tools in your company could pose a risk to your employees job security?

Youri: Job

Emil: security? Yes.

Youri: Ah. No, in our business, not. Because, uh, we do check ins, check outs, you know what I mean? Like, uh, it would be essential to have a living person always, you know, showing [00:12:00] properties and go to an operty, these kind of things.

No, I don't see that, uh, the moral aspect doesn't apply to us. I think that's fair. Yeah. *[Job replacement, No concern]*

Emil: Okay. Um, now we're going to a, uh, separate part, which is about willingness to learn. So how open would you say are you to exploring AI and its potential applications within your business?

Youri: Um, yeah, well, my obstacle would be the, the beginning, like starting something new, you know, like, uh, Getting used to it, learning is, but, uh, I'll be willing to be absolutely, if I see, if I know what the benefits can be, it's a simple calculation, you know, like the investment you have to make for it, money, time, and what you get back for it, you know, so, uh, yeah, I mean, from,

Emil: uh, from a scale to one to 10, how would you say, [00:13:00] what would you give?

Youri: Assuming that the benefit is, because that's basically what it's based on. Yeah, yeah, yeah. If the benefit is a 10, on a scale of 1 to 10, my willingness would be a 9, let's say, you know. I see, okay. The bigger the benefit, the more *[Willing to learn, Limitations on learning, 3. Learning and adoption of AI]*

Emil: the

Youri: willingness,

Emil: yeah. Then that leads to the next question I have, which is, uh, what sort of barriers do you think you would face while, uh, learning a new technology such as AI? You already mentioned the fact that it's a new thing to learn. Do you see any other barriers that you might face?

Youri: Um, well, I've tried some GPT, uh, I hit it contracted.

I stopped it.

Emil: Okay.

Youri: And I was very, um, disappointed really, you know, with,

Emil: yeah,

Youri: especially with, [00:14:00] uh, picture design and things that all the other robots, when you pay, you get more access, you know, never. And I just, and also with GPT itself, uh, I was not too happy with it, you know, like, I was asking, well, I was asking for some codes for, uh, for a web shop I was making.

And this is one of the things from memory, you know, but really it's so unbelievable, you know, and then I said, make it for the whole website. Yeah. You know, like lots of videos that had to put with the. With a link and embed it from YouTube and was like 18 videos. So I said, write a code for these videos that we've all embeds and it's all in live.

And then he only does the first three. And he says, yeah, like this, you can continue. Then I said, okay, now please do all 18. Then he does another five. Do you know what I mean? Yeah. Yeah. Yeah. [00:15:00] Do it. I'm fading, you know. And then again, he says like, Okay, yeah, from here you can just, uh, Do the same. I don't want to do the same.

I just, you know, like, Just give it to me. Yeah, exactly. This, I don't get it. Because, It's the machine, you know, just do it. It was a really strange experience that I had to discuss, like, and I just kept going, you know, until he did

Emil: it.

Youri: I mean, but I almost could have done it by myself. I didn't, you know?

Emil: Yeah.

I mean, there is some limitations with chat GPT. It's something that gets things wrong a lot of times. So,

Youri: yeah. And this is a concern, but this is not a concern for my business. Like that's there are, I think, especially chat GPT is a, is a I'm very biased, uh, well, things can be biased, you know, like, uh, you know, like, uh, [00:16:00] the aspect of interests and, uh, things, you know, like if we start to see artificial intelligence as our source of information, so our main source of information, uh, I think it's not transparent enough of how the algorithm and how the thoughts, let's call it, uh, uh, Are being put in there, you know what I mean?

Like in the end there's a human behind it. There's always human ability. And of course, if there's a new one, there's an interest, you know, so just by biases,

Emil: you know, that's, that's a fair assessment. Yeah. There, there, a lot of times, uh, just get information wrong, but a lot of times it, it also, it also helped me, um, make things easier.

Yeah, sometimes it does happen where it doesn't like, listen and [00:17:00] that doesn't look different to what you ask it, which is annoying. But they continue to improve the model itself and it will get better and better each time,

Youri: but

Emil: it's still, uh, still in a, in a process. That's how it is, you know,

Do you recall, do you know any other barriers other than those two? Um, Like maybe time, lack of time, lack of, uh, resources or something?

Youri: Yeah, yeah.

Emil: For the implementation, or the barrier? The barrier of using it, let's say. The barrier of, um, Of you learning it or your employees are learning it?

Youri: Yeah, exactly.

Yes. Yeah. Um, yeah, I think, uh, lack of [00:18:00] interest from employee. I think. Yeah. Something new is always difficult for employer, for employee. Of course. And then for an employee even worse because employees, they get their salary and they're not interested in. Yeah. It's not the first interest becoming more efficient, you know what I mean?

So to do something new employees, they like to repeat things, you know, and keep things easy and stay in their thing a little bit, you know? [3.

Learning and adoption of AI, Lack of interest]

Emil: Yeah. Okay.

Youri: Good answer. Um, uh, apparently we're at the end of our meeting it says. Is that because I put it, I planned it until 1130? Oh yeah. So I just changed the agenda time.

I'll just go to my calendar in a second.

Emil: I've just a few, a few more questions and then we'll be, we'll be over.

Youri: Let me [00:19:00] see if this is a trick. No, I'll put it to 12. Yeah. I got a message, you know, like,

Emil: I did not get that message, but yeah. In your opinion, does the portrayal of AI in pop culture and media significantly shape how you or your employees perceive it?

Like, for example, in movies you'd see robots taking over the world and such. Do you think that shapes viewing on AI in any way for you? If I have to, the concern that something like this, uh, do like those, the way that AI is portrayed in the media like that, does it affect your,

Youri: uh, everything's possible?

Yeah. Not necessarily possible, but possible. Yeah. But that's the thing that we started with basically depends, uh, how you apply it, you know, in the end.

Emil: [00:20:00] Yeah.

Youri: Yeah. It depends on the

Emil: person.

Youri: Yeah. Yeah,

Emil: exactly. If a bad person is, uh, gonna use AI in a bad way, that's

Youri: Yeah, yeah, yeah. In the end, it's already a bit of power, you know, power thing. *[Unethical use, Fear in media, 1. Concerns about AI]*

Because you see, China, the States, and Europe, and Russia, everybody, it's like a cold war, you know what I mean? Everybody's like, developing, trying to develop faster than the other ones, you know? So, it's not because they, uh They want to drink tea together, you know You know, there's a Power struggle, you know,

Emil: yeah, there's always a Also an ulterior motive Everything

Youri: yeah Yeah, so

Emil: you do you do recognize that it is possible like I suppose Yeah.

Yeah. Yeah. So this affect your view a little bit

Youri: Yeah, it will definitely have an effect my view, you know, *[Fear in media, 3. Learning and adoption of AI]*

Emil: all right [00:21:00] Um Last or when, uh, last, second, last, how do you foresee AI influencing, uh, the future of your industry and, you know, what are your thoughts on that?

Youri: Yeah, no, I, how I see it, it can be much more of course, but

I think specifically my industry, real estate, um, it doesn't, uh, I think we're really far from, yeah. Buyers buying a place just because a robot says it's a good place. You know what I mean? So not too much. I really, I think it's

like optimization of websites, visual things, you know, photos, videos, listings, text workflow, you know, processes, those kinds of things, you know, but I think it's really the things that people don't [00:22:00] see, you know, The background processes, let's say.

Okay. So not, uh, not too impactful. Okay. Right. In my branch. *[Job replacement, 2. Automation and job impact]*

Emil: That's, that's a fair view. Uh,

yeah, I think those, those are my last questions. Interview is, is, is done. Again, thank you very much for taking the time to be here with me. Yeah,

Youri: sure, man.

Emil: No worries.

Youri: Okay. Okay.
